

Was there an increase in the average total revenue for the pharmaceutical industry in year 4 in comparison to year 1?

These two bar charts show the average total revenue for healthcare sub industries in year 1 and year 4.

The standard deviation and the range have increased in year 4, indicating a larger amount of variation in the data and greater spread of values.

In year 4, companies in the pharmaceutical industry had an average total revenue that was slightly higher than in year 1.

However due to the increase in the average total revenue of all healthcare sub industries, the pharmaceutical industry is now performing just below average.
